Access

Objects can be public

Block public access (bucket settings)

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to
ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this
bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure
that your applications will work correctly without public access. If you require some level of public access to your buckets or objects
within, you can customize the individual settings below to suit your specific storage use cases. **Learn more** 🔗
